## Community Waterway Monitoring project

"Join us to monitor the health of our precious waterway"

### Project Goals

1. Monitor the environmental health of this complex waterway system
2. Build on and further establish baseline data, with a focus on the summer season brook ecology
3. Identify areas and issues for further landcare works
4. Assess the effectiveness of previous landcare works
5. Understand better the waterway's ecology
6. Build community partnerships and sharing of information
7. Protect and improve water quality
8. Find ways to buffer the waterway to the effects of climate change and declining flows
9. Inform landholders and the wider community on the current health of the waterway and the ecosystem services it provides
10. Raise awareness of the Gingin Brook system to the wider community
11. Identify priority works for community grant programs
12. Enhance the area's biodiversity and productivity
